

What you get, *and when.*

A voice agent that answers your phone in one second, 24/7 — quotes, qualifies, books into your calendar, takes payments, and writes every call into your CRM. Fixed price. Nothing reaches a real customer untested.

The process

DAY 0

A 30-minute call

Your hours, services and prices. The three calls you get most. Where bookings should land, and who a caller should be transferred to when the agent shouldn't handle it. That's everything I need.

DAYS 1-3

I build it

Conversation design, tool schema and guardrails. Calendar, CRM and SMS wired up. The agent is written to call real tools mid-conversation — checking availability, verifying a detail, writing the booking — not to improvise answers.

DAY 4

Tested before you hear it

The agent runs against 20 scripted calls in an automated harness — the awkward ones included: interruptions, wrong numbers, angry callers, questions it should refuse. Then you get a demo number and call it yourself.

DAY 5

Live, and yours

Your number, your hours, your script. A live dashboard showing every call. A hand-off document covering how to change the script, what it costs to run, and what to do if something looks wrong.

Timeline by tier: Starter 5 days · Standard 7 days · Advanced 10 days. Revisions to the script are included at every tier — 1, 2 and 3 respectively — and the script is approved by you before go-live, so a revision is rarely needed.

Everything *that ships.*

Not a prompt in a no-code tool. The platform (Vapi or Retell AI) is the transport — the tools, webhooks, integrations and dashboard are built for you.

A The agent

- System prompt written in your brand voice
- Tool schema — what it can actually do
- Guardrails: what it must never answer
- Natural voice, interruption & barge-in handling
- Warm transfer rules to a human

B The plumbing

- Phone number provisioned and routed
- Webhook service handling the tool calls
- Calendar: Google, Cal.com, Calendly
- CRM: GoHighLevel, HubSpot, Zoho, custom
- SMS confirmations and text-backs

C The visibility

- Live dashboard built for your trade
- Every call: transcript, outcome, recording
- Bookings, leads and payments as they land
- Filterable, exportable

D The handover

- Hand-off document — how to change the script
- Run-cost breakdown for your call volume
- Test-call recording set
- Optional care plan: monitoring & tuning

By tier

	STARTER • \$350	STANDARD • \$750	ADVANCED • \$1,500
Inbound agent on your number	Yes	Yes	Yes
Conversation script & flow design	Yes	Yes	Yes
Call log, transcript & outcome	Yes	Yes	Yes
Calendar booking + SMS confirmation	—	Yes	Yes
CRM integration	—	Yes	Yes
Live operator dashboard	—	Yes	Yes
Outbound follow-up / speed-to-lead	—	—	Yes
Payments or identity verification	—	—	Yes
Warm transfer to a human	—	—	Yes
Tuning & support after go-live	—	—	30 days

What it costs *to run*.

The build is a one-off. After that you pay the platforms directly — I don't mark this up or resell it, and the accounts stay in your name.

PER MINUTE OF CALL	TYPICAL	PAID TO
Telephony (number + minutes)	\$0.01 – 0.02	Twilio
Voice platform	\$0.05 – 0.10	Vapi / Retell AI
Language model	\$0.02 – 0.05	OpenAI
All-in	\$0.10 – 0.20	—

A worked example. 200 calls a month averaging 3 minutes is 600 minutes — roughly **\$60–120/month**, plus about \$2 for the number. A receptionist covering the same hours costs a great deal more, and the agent doesn't miss the 6pm Saturday call. Heavy or unusual volumes are worth checking before you commit — ask me and I'll run your numbers.

Questions I get asked

Does it sound robotic?

No. Natural voices, interruption handling, and a script written in your tone. You'll hear it on a demo number before it ever answers a real customer — and if it doesn't sound right, we change it.

What happens when it can't answer something?

Whatever you decide. It takes a message, books a callback, or warm-transfers to a person with the full call context so the caller never repeats themselves. Guardrails stop it inventing an answer.

Can it book into the calendar and CRM we already use?

Yes — Google Calendar, GoHighLevel, HubSpot, Zoho, Calendly, Cal.com, Open Dental, ServiceTitan, Housecall Pro, Toast, OpenTable and others, via webhooks or n8n. If yours isn't listed, ask; most systems with an API can be wired in.

Who owns it?

You do. The number, the platform accounts and the prompt are all in your name. There's no lock-in and nothing stops working if we part ways.

What if it gets something wrong on a real call?

Every call is logged with a transcript, so you can see exactly what happened. Script fixes are quick. That's what the optional care plan covers — monitoring, tuning and a monthly report.
